

History of Sock-eez

Sock-eez, a unique and trouble-free hosiery and sock remover has been designed to ease the pain and frustration for anyone experiencing the difficulty of removing compression hosiery or socks, from the left or the right leg. Benefiting greatly from this remarkable product are people who are unable to easily bend; such as women who are pregnant, the elderly, disabled, post-operative, injured, incapacitated and those with chronic back problems. **Sock-eez** works equally well removing normal hosiery and sporting socks too, as it is ergonomically designed and easy to use by anyone.

Sock-eez was created out of love for our mom, who suffered a debilitating disease resulting in leg problems requiring strong compression hosiery prescribed for her symptoms of edema. It was soon evident how much of a struggle it was to take these hose off. The improvised methods presented to her by the occupational therapist were ineffective; in fact, many caused painful bruising and even ruined expensive hosiery.

Her struggle inspired her son, an artist, to create a simple device that would assist in the daily and tedious task of removing hosiery and socks, replacing strength with leverage, therefore increasing independence and ease. While there are several products available to put hose on, a product to remove them did not exist, until now.

Sock-eez has been successfully “mom tested,” and is now available to the general public. **Sock-eez** is proudly made in America.

Sock-eez™

SOCKS OFF WITH EASE

Point your toe and go!

Never have trouble removing your compression socks again.

The new and innovative sock-eez makes it simple and easy to remove those socks without straining a muscle.

Sock-eez, an assisted daily living dressing aid was developed and designed for those who suffer from Lymphedema, Deep Vein Thrombosis, Arthritis and Edema. The elderly and the physically challenged also benefit from the use of this remarkable, ergonomic dressing aid that removes the toughest compression hose with one easy, strain free, motion.

Great for athletic socks, knee highs and traditional socks too!

Sockeez Sock Doffer™

1. To use **Sock-eez**, it is important to be in a seated position. To begin, place lanyard on wrist and slide the far end tip of the **Sock-eez** under the top band of the sock, at the back of the leg. It is helpful at this stage to keep the heel on the floor for stability.

2. With the toes pointing upward, this allows the back of the leg and foot to become as straight as possible. This action will promote an easy slide down the side of the leg and back around towards the heel. It is important to push slowly so the tip of the **Sock-eez** remains between the skin and the garment always. The "hook" gently forces and gathers the sock as you push downward toward the heel.

3. Once the far end tip of the **Sock-eez** reaches the heel, point the toes down. At this stage, you can either pull the foot out of the sock by sliding the heel up the **Sock-eez** like a ramp or continue to push the sock off with the **Sock-eez**. It is very important to always keep your toes pointed down at this final stage to insure an easy removal of the sock.

4. Socks off with ease! For removal of sock on left leg, position the **Sock-eez** on the inside of the leg, and follow the previous steps 1 thru 3.
